

*This statement is to clarify page 28 of 2356 of records release [D22000030 FORENSICS DOCUMENTS \(RELEASED 10-31-2025\).pdf](#) available on the ISP website. Our Idaho State Police Forensic Services Laboratory Information Management (ILIMS) system is programmed to normally print a PDF to the database based on the case file information available when the evidence is received in the laboratory. That PDF is stored in the database and the stored PDF is reprinted anytime that information is called for again from the database (such as a discovery request or a public records request). Unfortunately, that print to PDF storage in the database did not happen on this specific submission. Our laboratory information management team has confirmed, via the database date and time stamp, that the name "Brian Kohberger" was added to this request on January 5, 2023. Because the documentation for the public release of this information was printed recently, the print to PDF function pulled information from the database that was not part of the record on December 5, 2022. Had the record been generated before January 5, 2023, no suspect name would have appeared on the document. The information provided is accurate overall but does not reflect the limited information ISPFS had at the time of the original submission.*
